

GenQuery AI Powered Assistant – Project Documentation

1. Project Overview

GenQuery AI Powered Assistant is a full-stack project organized into a frontend and a backend. The GitHub repository contains the frontend folder (studentfe), backend folder (studentbeapi), README.md, .gitignore, and the project configuration files.

2. Project Structure

The project is organized as follows:

- studentfe/ – frontend application
- studentbeapi/ – backend application
- README.md – project README
- .gitignore – Git ignore configuration
- docs/ – project documentation

3. Frontend

The frontend is located in studentfe/studentfe. The project contains Angular/Ionic configuration files such as angular.json and ionic.config.json, together with package.json, package-lock.json, tsconfig.json, tsconfig.app.json, and tsconfig.spec.json.

4. Backend

The backend is located in studentbeapi. The project contains Django-related files including manage.py, the studentapi application/project structure, and the studentapp application.

5. JSON and Configuration Files

The project contains JSON configuration files used by the frontend, including package.json, package-lock.json, angular.json, ionic.config.json, tsconfig.json, tsconfig.app.json, tsconfig.spec.json, and .eslintrc.json.

6. Documentation and Repository

This document is included as project documentation. The GitHub repository also contains README.md and the source-code folders. The repository uses the main branch.

7. GitHub Repository

Repository: <https://github.com/pagadalaalekhya07-sketch/genqueryaipoweredassistant>

8. Conclusion

The project is maintained as a single Git repository containing the frontend, backend, configuration files, README, and project documentation.
